

Rootgrow *Wisteria sinensis* Trial May 2004 to November 2004

A trial was undertaken using *Wisteria sinensis* and **rootgrow** by Steve of Chartham Hatch near Canterbury, Kent in 2004. The images (taken mid November 2004) show a plant treated on the left compared with an untreated plant on the right and planted at the same time on the same side of his house in May 2004.

The images show a three times greater height of treated plants as well as lateral spread across the walls (count the bricks!).

*Steve said 'I have tried **rootgrow** on tulips in containers, hedging plants and seen the results on my *Wisteria* and am amazed by the differences. I will continue to buy it and use it in my work and at home'*
